

Heavy Equipment Inspections

What does MEVAS inspect?

Basically we can inspect the condition of any machine or truck with a combustion engine and a hydraulic system. Over the years of doing inspections we have qualified to some areas. We provide some [sample-reports](#) for better understanding what you receive after our inspection.

Construction Machines

Core business of MEVAS is inspection of used construction machines and earthmovers such as excavators, wheel loaders, bulldozers, motor graders and road construction machinery. We have experience with machines of Komatsu, Caterpillar, Hitachi, Terex, Volvo and many other brands.

Mobile Cranes & Fork Lift Trucks

Some of our engineers are trained for used crane inspections. We can inspect for our customers mobile cranes, harbor cranes, tower cranes, reach stackers and fork lift trucks. No matter if it is a 2 ton forklift or a 150 ton mobile crane - we are qualified to perform a profound expertise.

Road trucks and Concrete Pumps

The last couple of years we have inspected more than 200 road trucks, maybe 40 concrete pumps and more than 150 ready-mix trucks. We helped our customers to select the best trucks for the import.

Recycling Machinery

Purchasing a recycling machine such as a rock crusher or a screening machine is very risky - even if you send your own technician. These machines can have many hidden problems. We are looking back to at least 60 inspected rock crushers of many brands such as Pegson, Terex, Gipo, Finlay, Fintec, Sandvik and some other brands.
