

Heavy Equipment Inspections

What does MEVAS inspect?

We perform pre-delivery inspections for excavators, wheel loaders, motor graders, cranes, trucks, concrete pumps and many other machines. No matter if the machine is from Komatsu, Caterpillar, Volvo or Grove - we have the right machine specialist available for any used construction machine you need to get inspected. [Details...](#)

What is our qualification?

Mevas engineers are trained in used machine inspections. We have [specialists](#) for cranes, earthmoving machines and trucks. Inspectors are not involved in machine trading and have years of experience and [knowledge](#) in the world of heavy machinery. [Details...](#)

How much does it cost?

We can't tell how much it will cost as long as we don't know the specific machine and its location. But we know it costs less than you could lose with paying good money for a bad machine. [Details...](#)

What will you receive?

After the inspection you will get a link to a website with all related pictures. You will receive an inspection report in PDF format. For some machines you will additionally get info about service and machine history. [Sample Reports](#)

How to order MEVAS inspections?

We have a specific site with details how to order our service. Please send us machine and supplier details by using our contacts page. [Details...](#)

Where can we inspect equipment?

Mevas technicians are available in many countries in Europe, in the U.A.E., in the USA, in Australia and in some other countries. [Details...](#)

Additional services by MEVAS

MEVAS is one of the few independent companies outside of the main plant and construction machinery manufacturers and distributors that can offer a full machine inspection service, utilizing a team of fully experienced and well respected plant inspectors.

We provide other services such as spare parts sourcing, used equipment sourcing, equipment consultancy, freight and cargo survey and we have Caterpillar and Volvo spare parts catalogues for sale.

[Details...](#)

Regardless of whether our customer requests a single machine inspection or the inspection of a whole fleet, MEVAS are able to handle it. For example we inspected a 29 large unit mining fleet, including estimations of repair costs and also evaluated the qualifications of the Mine-workshop for the potential buyer. The whole job was accomplished within six working days.

Depending on the solution required, MEVAS is able to do a full technical inspection of assets or verification if the machine or equipment is as supposed to be. If the requirement is just a technical condition report or even the valuation of equipment, we have the capability to do it.

Let our team of equipment inspectors reduce risks and save you time and money. These reports give all the information needed to make informed decisions and to help minimize risk. In today's construction, plant and machinery market, there are so many variables which decide the value of a particular unit - some machines may even be unique.

Unlike cars, where the make, model, age and mileage often decide the final value, there are so many additional factors to be taken into account with construction and mining equipment. Site and material conditions, types of usage, undercarriage component and tire wear, bodywork condition, major mechanical component condition, paintwork, machine hours and all of the small intricate details of a machine's specification as well as manufacturer's changes, improvements and upgrades - all these items are high cost.

Why can you rely on MEVAS? First of all, we do nothing else other than inspect heavy equipment. Secondly but just as important to our clients, is our independence from any organizations that buy or sell equipment. Being totally independent ensures that our clients get a totally unbiased appraisal of a Machines condition. All information regarding the equipment, location, supplier and condition will only be shared with yourselves.

Our core business is inspecting earthmoving machines but we also have engineers that specialize in crane inspections for our international customers. Over 500 inspections are now an average years' work for MEVAS. For many years we have been renowned for high quality construction Machine inspections.

Please get in touch for us if you have any question about our activities. We are ready to answer your questions. Our website is www.mevas.eu.
