

# Specialized in Heavy Equipment

## Why should you hire MEVAS?

...because we do nothing else than heavy equipment inspections every day. Certainly there are other companies available. But with more than 500 inspected machines each year we are proud to be the major player in this area in Europe. See [here](#) a list of our valued customers.

## Construction Machine Inspectors

All our engineers have many years of experience. Most of them have a background as mechanics with a Caterpillar-, Komatsu-, or Crane distributor. Some of our inspectors still repair machines and trucks.

## Cranes & Fork Lift Inspections

A few inspectors in our network have been trained to perform safety and quality inspections for cranes. Checking out an LMB or measuring the swing bearing of a crane is a procedure the technicians are used to do.

## Specializing in CAT & Volvo

We are specialized in Caterpillar and Volvo equipment. In most areas we can offer qualified inspections including reading of internal machine computers. We can gain access to the so called ECM and store a [CAT-PSR](#) or a [Volvo-Matris](#).

## TÜV approved engineers

Some of our engineers are approved and certified by TÜV Germany for machine safety inspections.

## Special Equipment Inspections

We have some experience in special equipment. Some inspections have been done in the past on forestry equipment and blast hole rock drills for quarry and mining. We provide some [sample reports here](#).

## MEVAS History and Background

In 2006 Wolfgang Bühn, at this time Used Equipment Manager with Zeppelin-CAT recognised that the industry needed a trustworthy and truly independent inspection and evaluation service and with this in mind he founded his company MEVAS. He now offers to customers from all over the World independent machinery inspections and evaluation's, and what started as a one man business in 2006 has continued to grow into what is now probably the largest appraisal company in Europe. Last year alone Mevas inspected over 500 machines for end users, traders and finance companies. MEVAS currently has 11 independent inspectors operating in many countries throughout Europe. In December 2010 another inspector based in Dubai joined the Mevas team to give full coverage for the Middle East along with another in St.Petersburg to cover part of Russia. More info about business policy and our ethics you can read [here](#).
